

Claro

An AI stylist that builds and pays for a complete outfit across multiple stores.

Gemini Notebook

The fragmented reality of multi-store shopping

Shoppers wanting a complete look rarely buy everything from a single retailer.

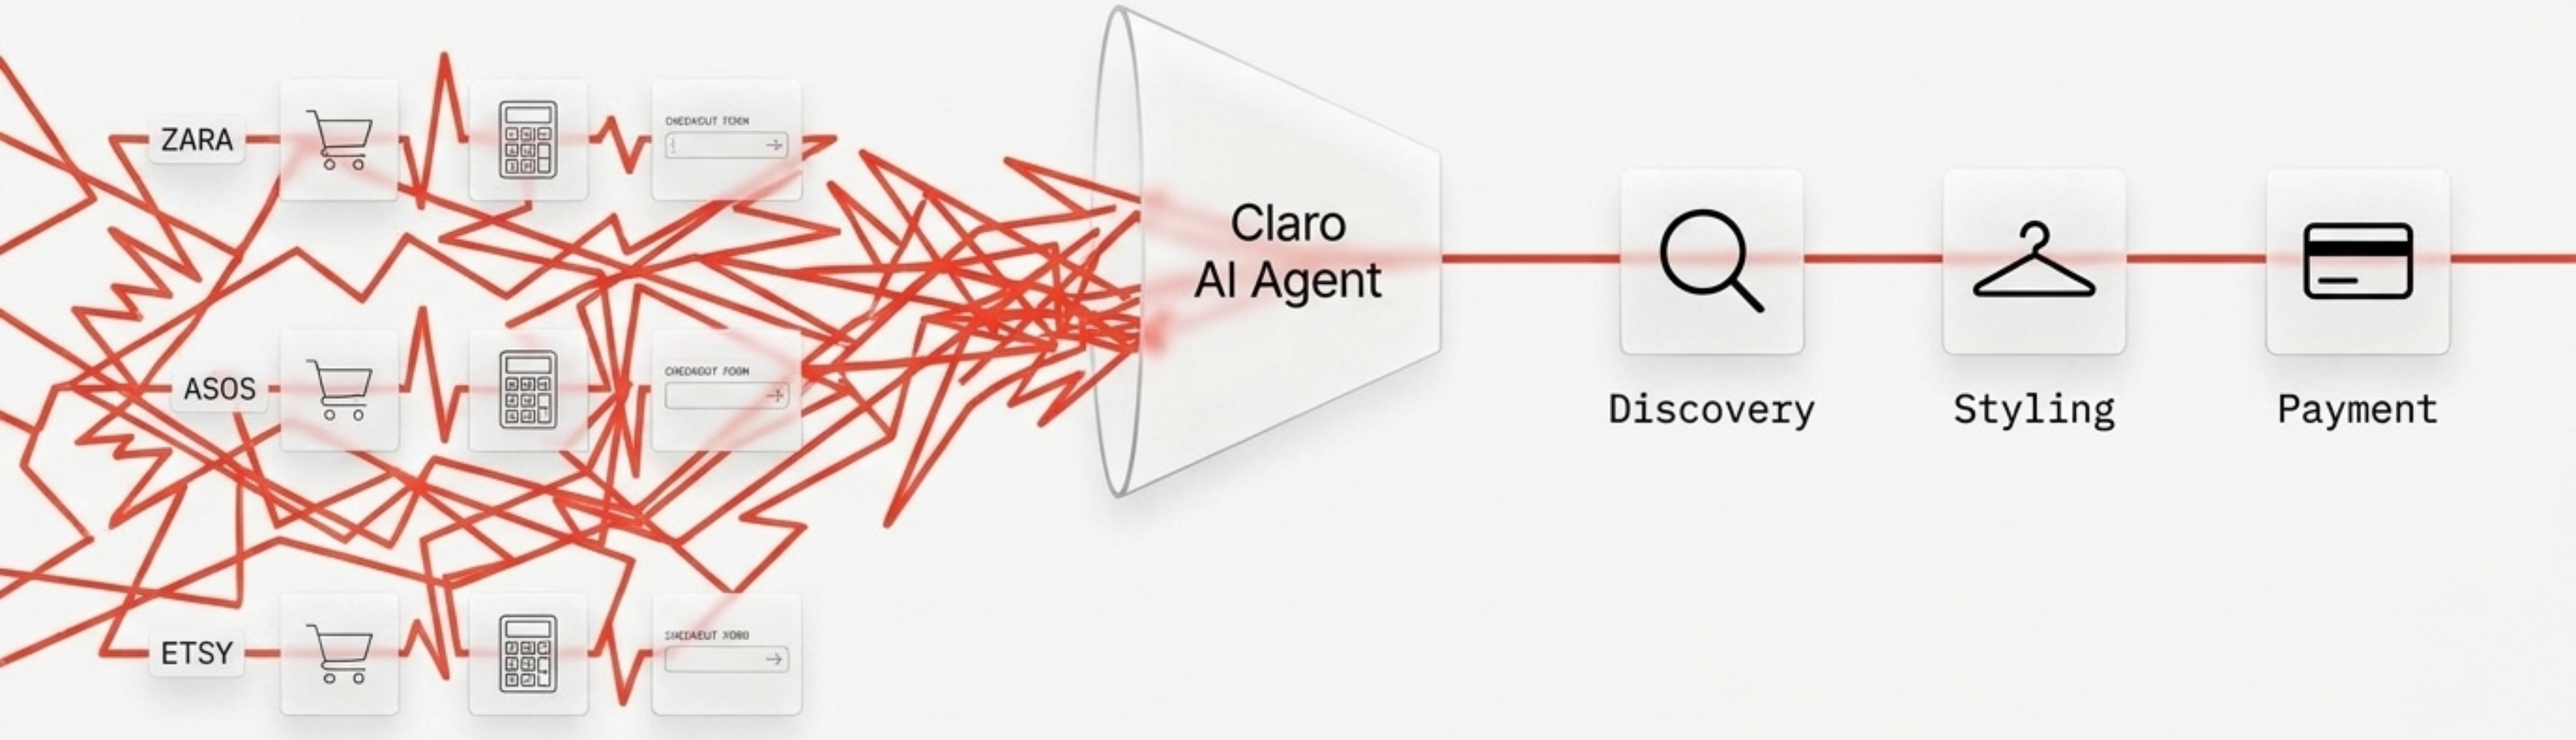

The result is a frustrating loop of context-switching, budget blind spots, and cart abandonment.

Gemini Notebook

One prompt. One outfit. One checkout.

Claro consolidates cross-store product discovery, styling logic, budget guardrails, and multi-merchant payment into a single conversational session. Claro high-fashion: eeemics, breadrumbs and progress trackers.

Gemini Notebook

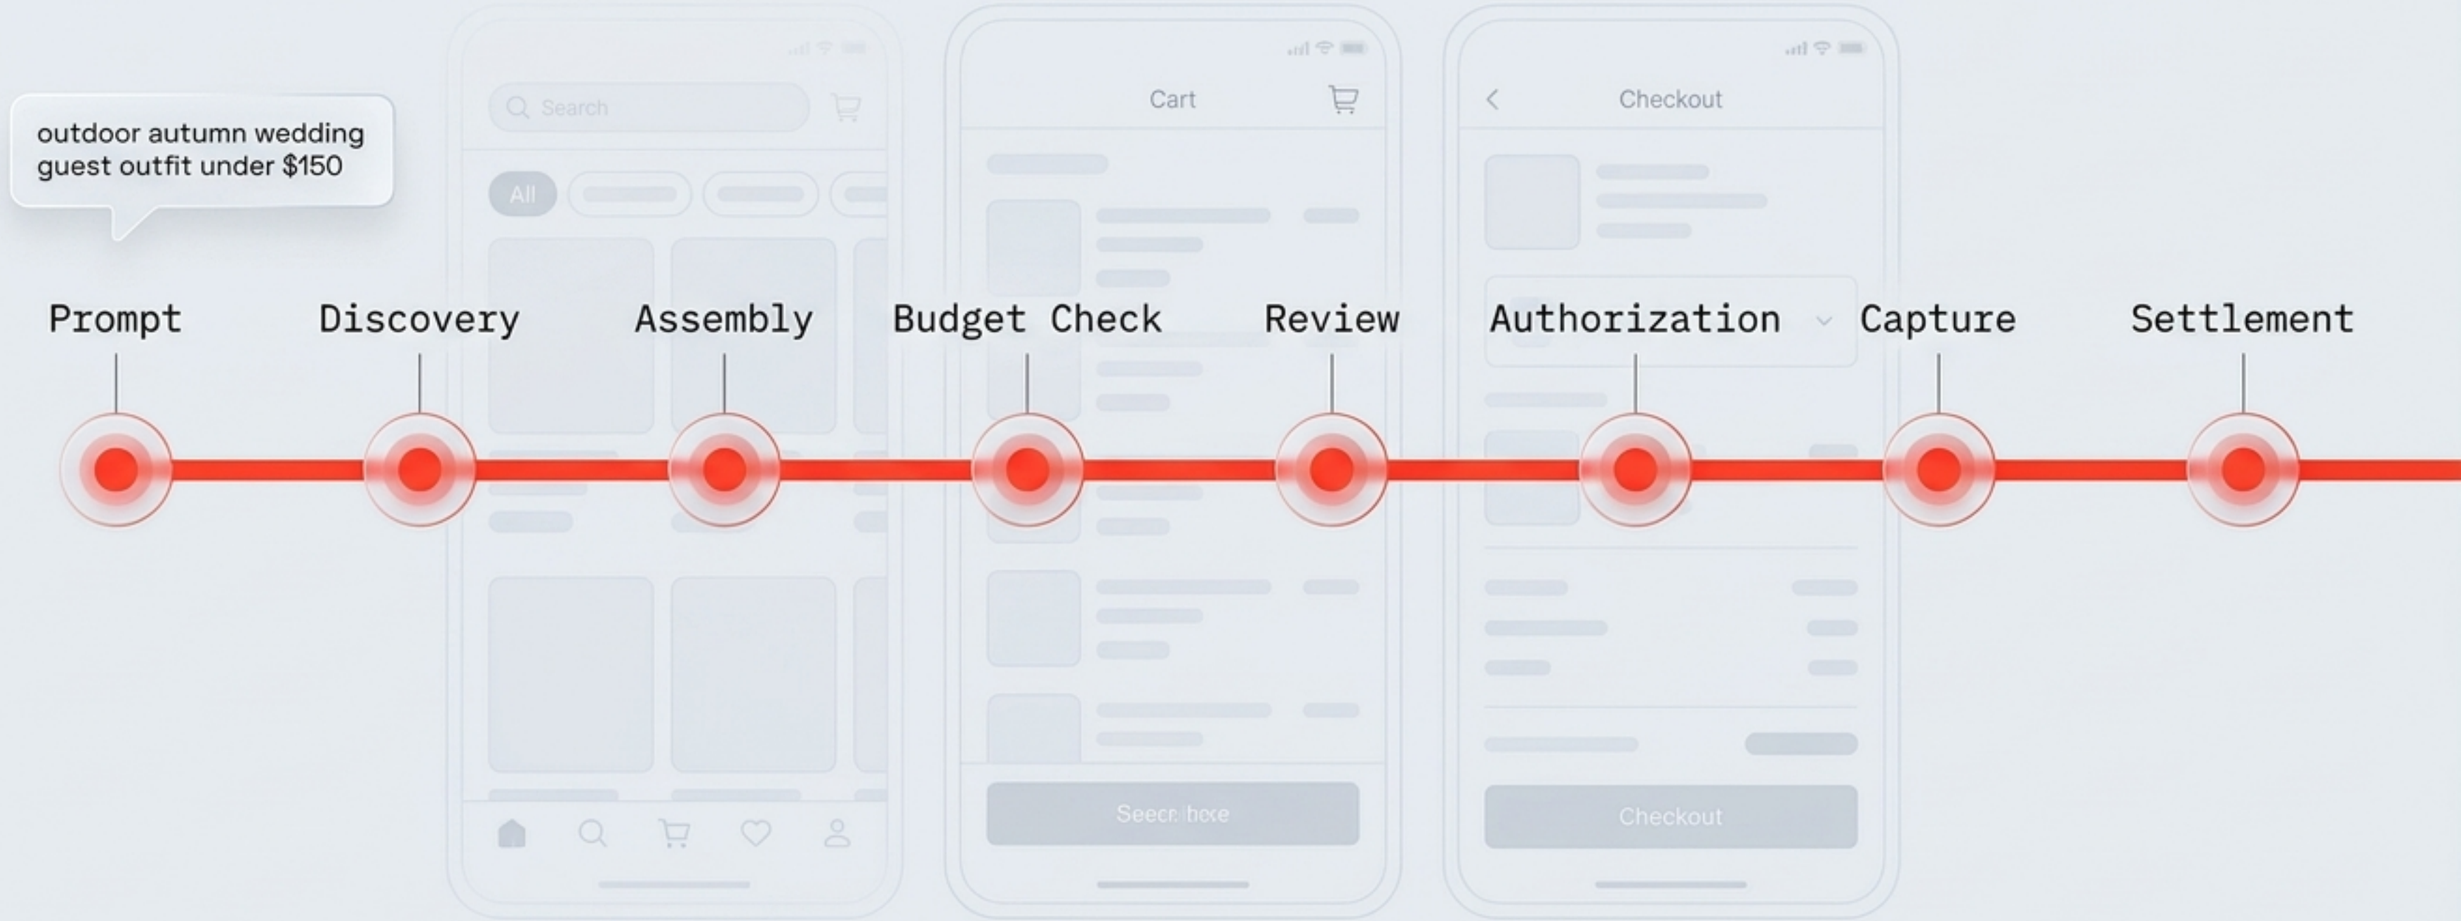

Moving beyond recommendation to transaction

	Traditional Shopping	Standard AI Recommenders	**Claro AI Shopping**
Cross-store coordination	✗	✓	✓
Automated budget enforcement	✗	✗	✓
Structured data review (AG Grid)	✗	✗	✓
Completes multi-merchant checkout	Fragmented only	Links only	✓ **Unified checkout**

Gemini Notebook

The end-to-end user journey

A seamless progression from a single natural-language prompt to a fully settled multi-merchant transaction.

Gemini Notebook

Pillar 1: Conversational styling and deterministic discovery

Frontend UI

outdoor autumn wedding guest outfit under $150

Backend Tool Calling

```
import { AI } from 'vercel-ai-sdk';

const products = await AI.query({
   api: 'Channel3 API',
   prompt: 'outdoor autumn wedding guest outfit under $150'
});
```

```
{
 "raw_data": [
   "...dress, floral...",
   "Item X: $149",
   "SKU:12345..."]
 ], -->
 {
   "product": {
     "name": "...",
     "price": ...
   }
 }, -->
 [{…}, {…}, {…}]
]
```

Fallback: Deterministic mock catalog ensures demo reliability

Gemini Notebook

Pillar 2: Agentic budget enforcement

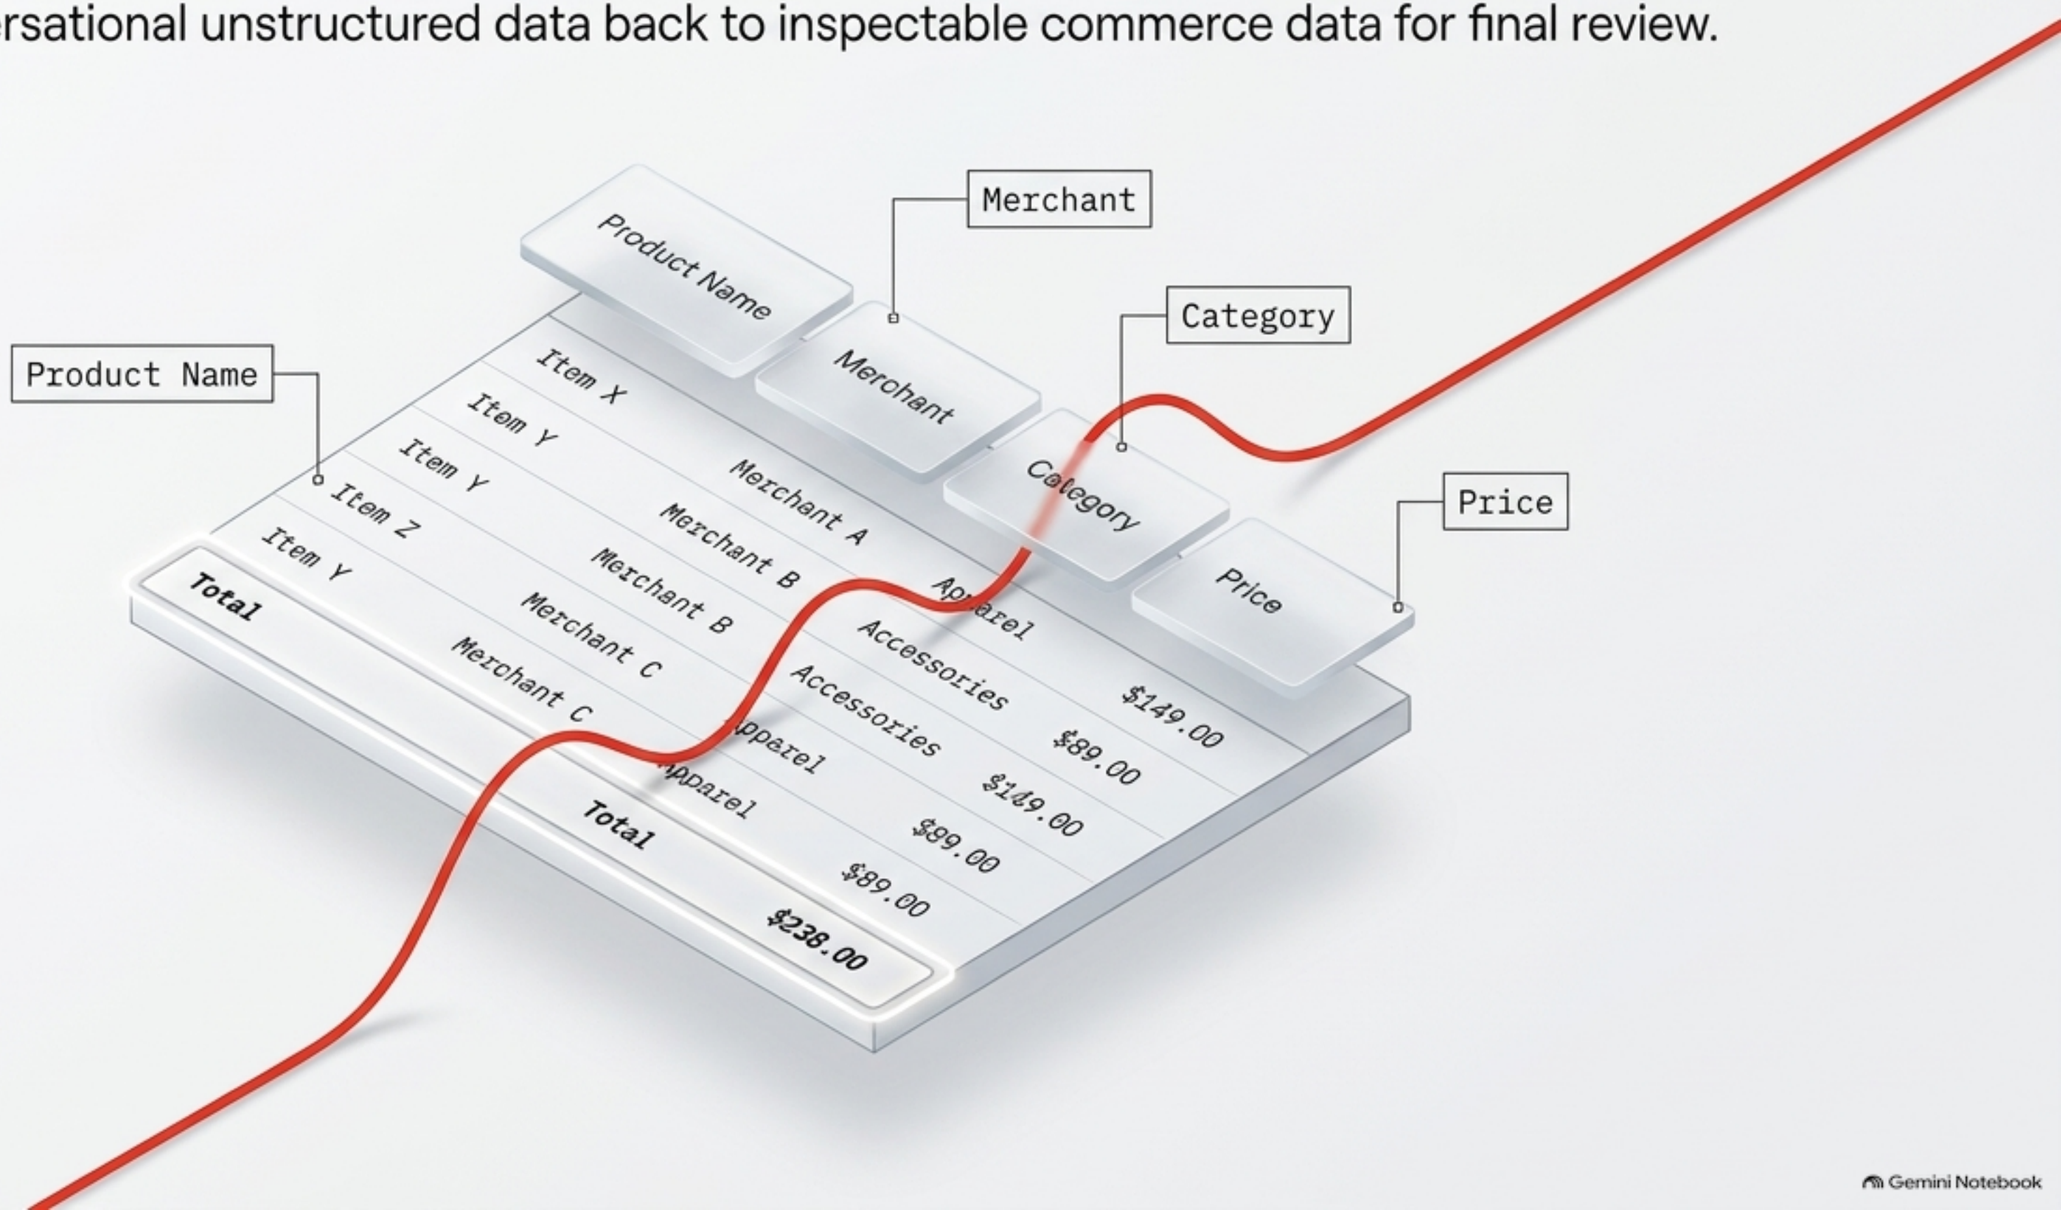

The budget is enforced in application code through the `price_outfit` tool.

Gemini Notebook

Pillar 3: Structured inspection powered by AG Grid

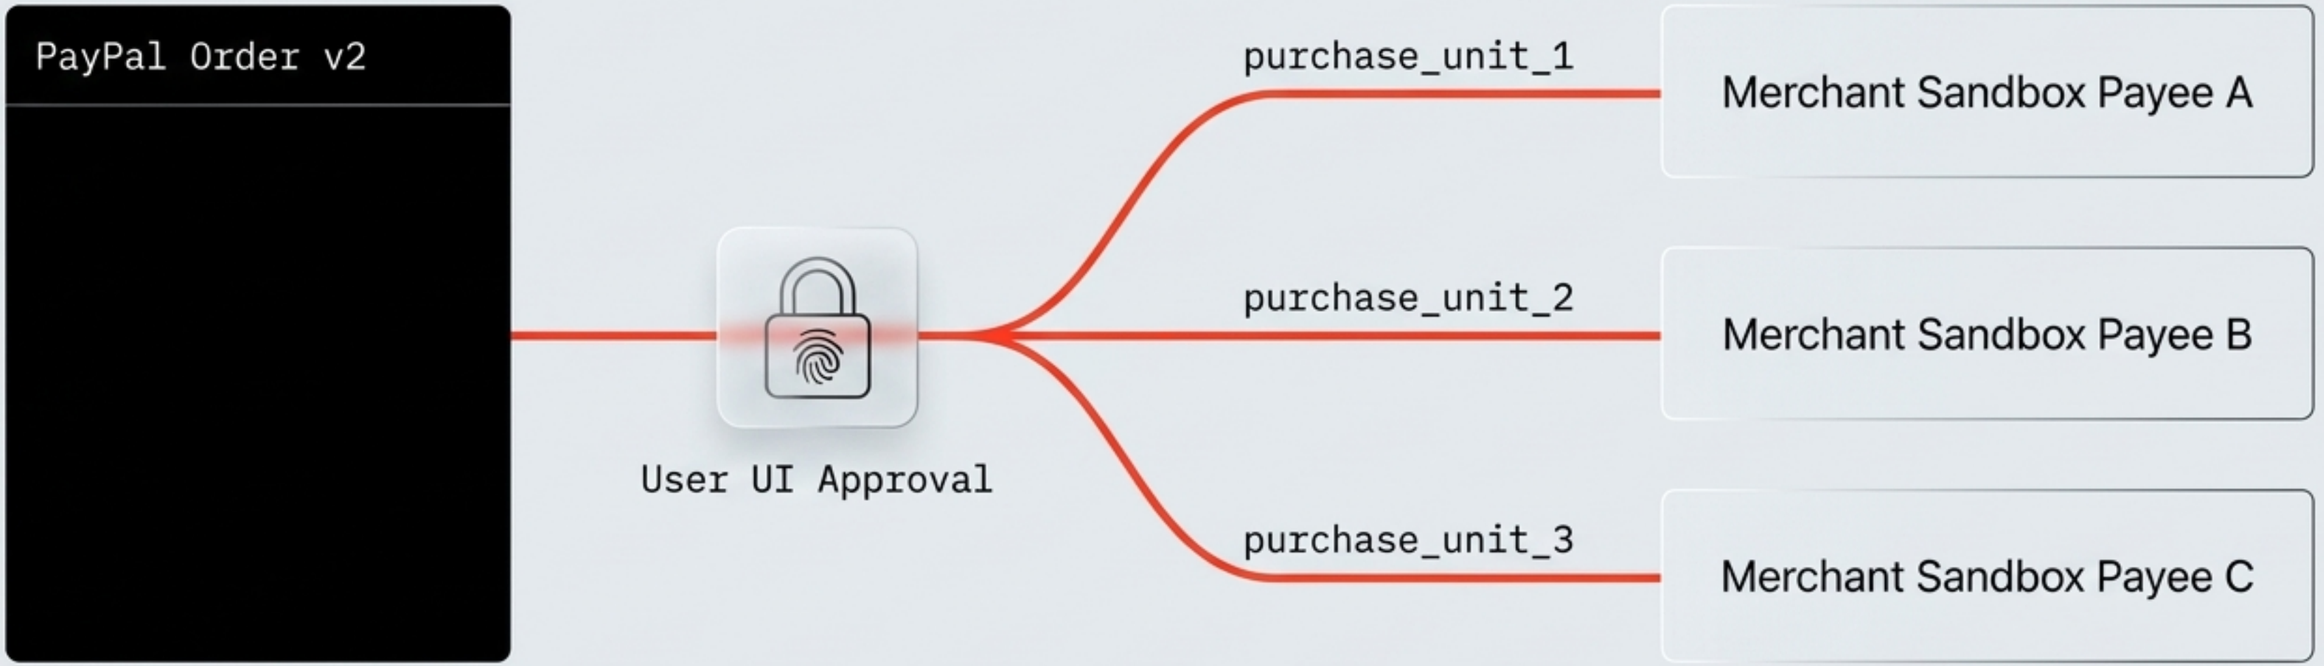

Moving from conversational unstructured data back to inspectable commerce data for final review.

Gemini Notebook

The transactional architecture: Multi-merchant settlement

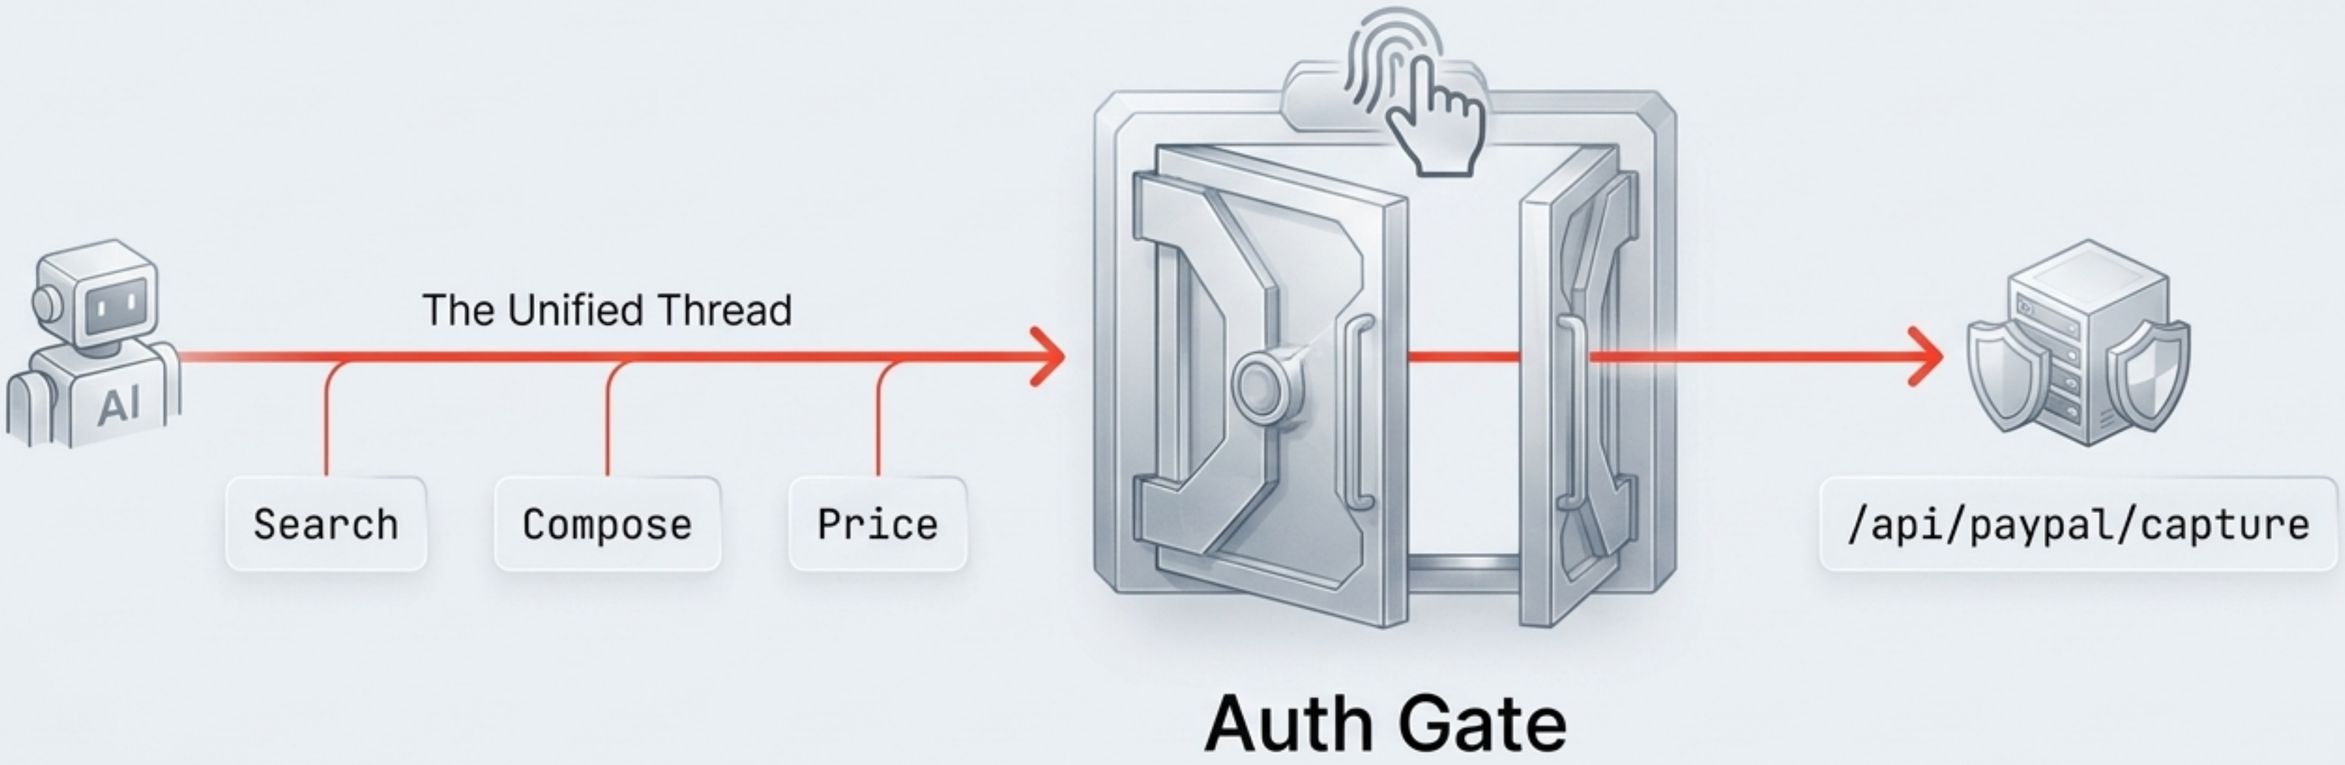

Claro creates a single PayPal Orders v2 order containing one `purchase_unit` for each merchant receiver. One user approval drives multiple backend settlements.

Gemini Notebook

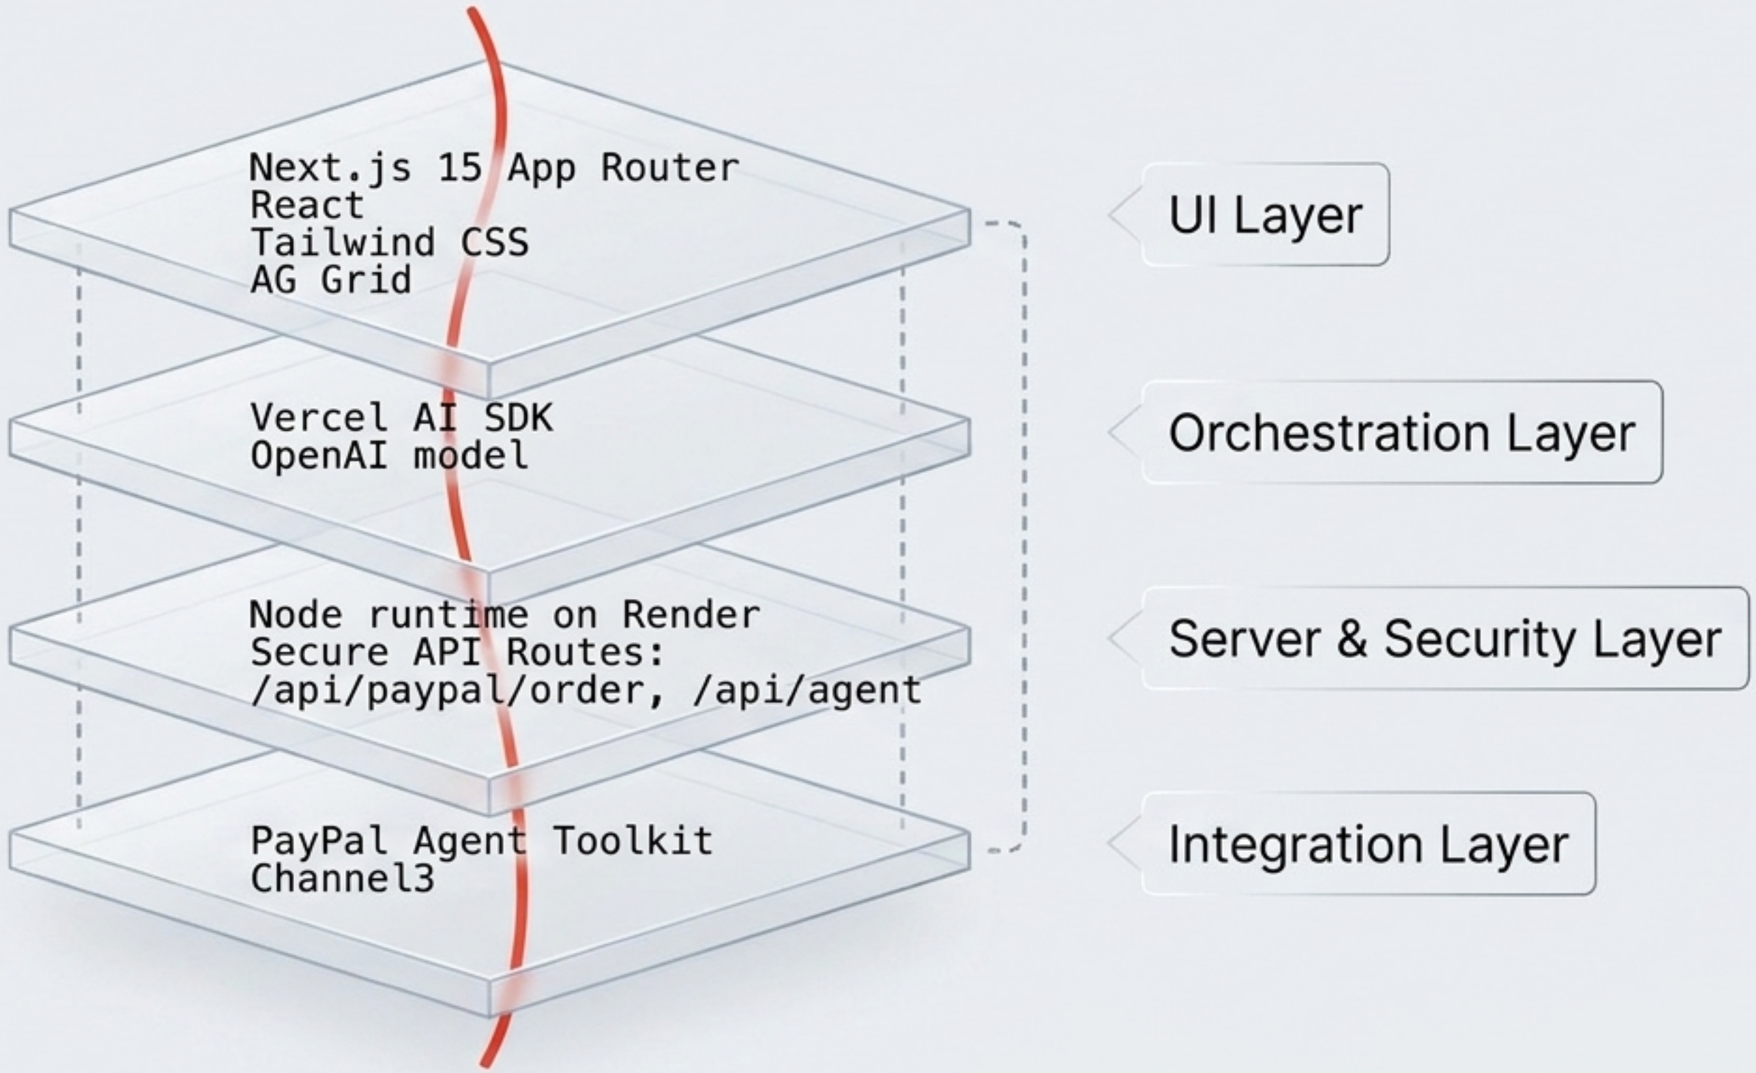

Human-in-the-loop safety architecture

Claro never captures payment **automatically**. The agent has freedom to search, compose, and price—but financial capture requires explicit user authorization.

Gemini Notebook

The technical stack powering Claro

Gemini Notebook

The ecosystem value proposition

Shoppers

Zero friction, complete context retention, and strict budget control.

Independent Merchants

Lower cart abandonment and frictionless product discovery outside of monolithic marketplaces.

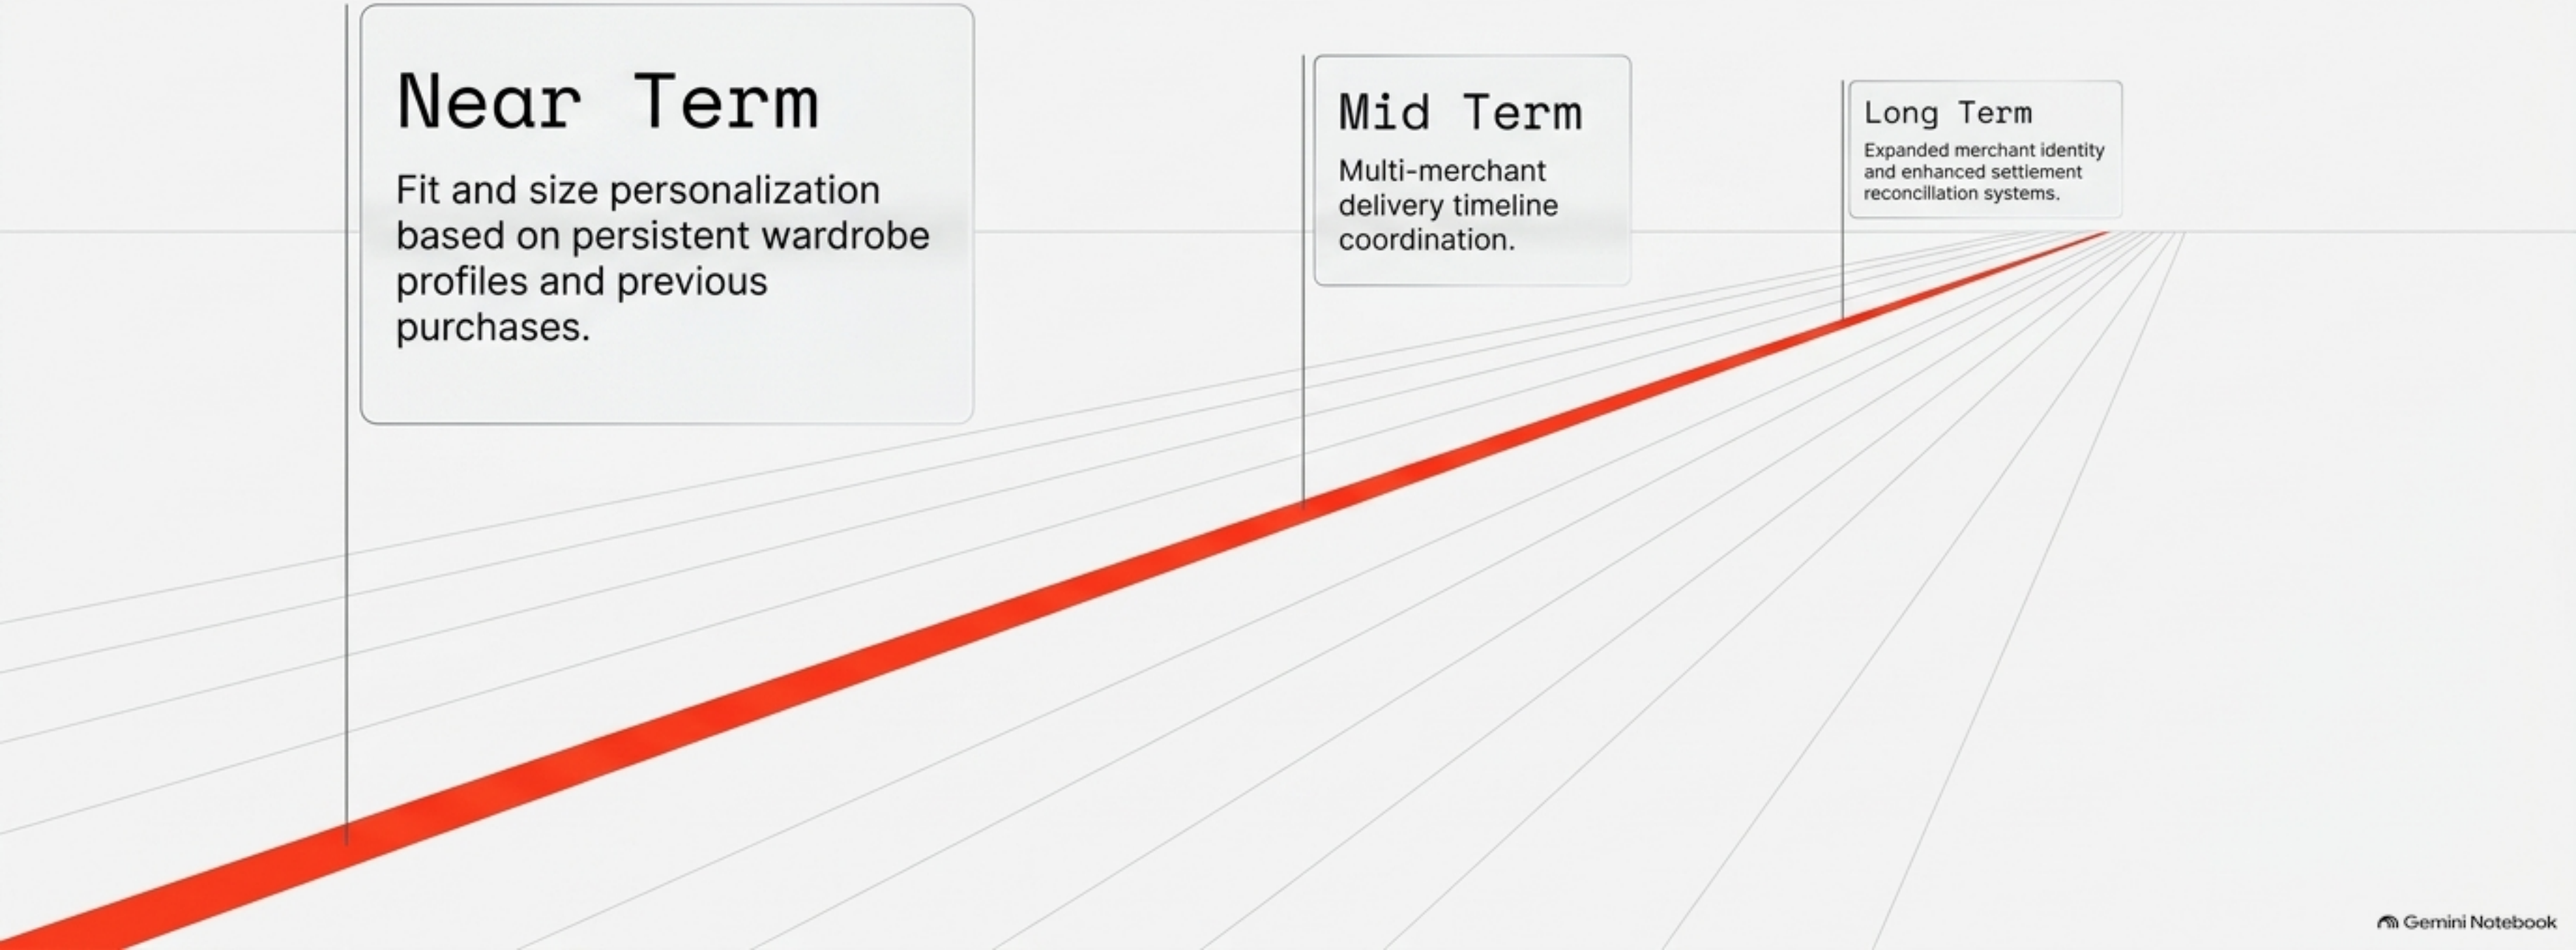

PayPal

Positions PayPal as the foundational financial backbone for the incoming wave of autonomous AI commerce agents.

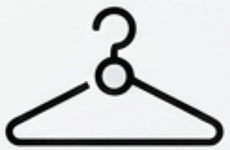

Gemini Notebook

Expanding the Claro ecosystem

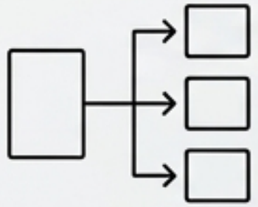

Gemini Notebook

The future of frictionless commerce

The Core Product

Claro: An AI stylist that builds and pays for complete outfits.

The PayPal Core

Multi-merchant settlement via Orders v2 and server-side capture.

```
{
  "agent": "Claro-AI",
  "model": "GPT-4",
  "context": "deterministic",
  "review": "AG-Grid"
}
```

The Agent Tech

OpenAI + Vercel AI SDK with deterministic Channel3 discovery and AG Grid structured review.

The Impact

Eliminates fragmented carts, enforces budgets, and requires human-in-the-loop safety.
